PICK THE RIGHT PICKING METHOD

PAPER-PICKING

PROS
- Low cost
- Simple, low risk

CONS
- Slow, labor-intensive
- Subject to large number of errors
- Identifying packages is a manual process
- More staff is required to check orders, which increases costs and time of fulfillment

HAND-HELD RF PICKING

PROS
- Higher accuracy than paper, product UPC verification

CONS
- Low pick rate
- Not hands-free, identifying packages is a manual process
- Wireless network is required throughout warehouse

VOICE-PICKING

PROS
- Higher pick rate
- Improved accuracy over paper
- Hands-free and paperless.

CONS
- Complete warehouse management system (WMS) required
- Opportunities for human error
- Memorization of voice commands is required
- High capital costs and a wireless network is required throughout warehouse

HANDS-FREE SCAN PICKING

PROS
- High accuracy and pick rate
- Increased efficiency; fast and easy training
- Quick implementation period (8 weeks)
- Fast return on investment (less than 12 months)
- Paperless

CONS
- A wireless network is required throughout warehouse
- Interface for transmission of data between enterprise resource planning (ERP) and device
- Accurate UPC codes required

PICKRIGHT BY **PROCAT**

\+

This is where PickRight reigns supreme. As one of the best-in-class hands-free barcode scanning technologies designed by Zebra for distribution centers of any size, you get 99.95% accuracy, picker productivity increases of 20-40%, and so much more. Reach out to ProCat Distribution Technologies to learn more.
